COMMISSIONING NOTES

MECHANICAL SYSTEMS FLORIDA BUILDING CODE COMMISSIONING AND COMPLETION REQUIREMENTS

CX.1 – Commissioning Description: Commissioning (Cx) is the comprehensive and systematic process of verifying that the building systems perform interactively in accordance with the design intent, the construction documents and the User's operational needs. The Cx process shall encompass and coordinate the equipment and system documentation, equipment start up, control system calibration, test and balance, functional performance testing and user training. The Contractor shall perform Commissioning to achieve the following specific objectives according to the Contract Documents:

- Verify and document that all components requiring service receive complete pre-functional checkout by the installing contractor and can be accessed, serviced, and replaced without disturbing nearby components, including other equipment, ducts, piping, etc.
- Verify and document that equipment and systems are installed, started and receive adequate operational checkout in accordance with the contract documents, the manufacturer's recommendations and industry accepted standards.
- Verify and document the proper functional performance and integration of equipment and systems based on the design criteria and contract documents.
- Verify the completeness of Operations and Maintenance materials.

CX.1.1 – Commissioning Authority (CxA): The Contractor shall retain the services of a Commissioning Authority (CxA) acceptable to the Owner and Engineer of Record (EOR). The CxA, a registered design professional or approved agency independent from the design or construction of the project shall be the single point of contact for the Cx team management. Documentation of the Cx process and preparation and distribution of key management reports is the responsibility of CxA. The CxA shall also provide an advisory role to the Construction Team and shall ensure that Cx activities are executed in accordance with the accepted processes, plans and specifications.

CX.2 – Requirements: Prior to passing the final Mechanical Inspection by the AHJ, the EOR must provide evidence of mechanical systems commissioning and completion. Copies of all documentation shall be given by the CxA to the EOR and Owner, and shall be made available to the AHJ upon request.

CX.2.1 – Commissioning Plan (Cx Plan): The Contractor shall provide a Commissioning Plan developed by the CxA, a registered design professional or approved agency. The general Cx requirements shall be detailed in the Cx Plan. The Cx Plan shall provide guidance in the execution of the Cx process. The Contractor shall be familiar with all parts of the Cx Plan and shall execute all Cx responsibilities assigned to them in accordance with the Cx Plan. The Cx Plan shall include, as a minimum, the following items:

- A narrative description of the activities that will be accomplished during each phase of commissioning, including the personnel intended to accomplish each of the activities.
- A listing of the specific equipment, appliances or systems to be tested and a description of the tests to be performed.
- Functions to be tested, including, but not limited to calibrations and economizer controls.
- Conditions under which the test will be performed. At a minimum, testing shall affirm winter and summer design conditions and full outside air conditions.
- Measurable criteria for performance.

CX.2.2 – Air Distribution System Testing, Adjusting and Balancing (TAB): The Contractor shall provide a written balance report to the Owner and Engineer of Record (EOR) for all HVAC systems serving zones with a total conditioned area exceeding 5,000 SF. Air distribution systems shall be tested, adjusted, and balanced by a licensed engineer or a company or individual holding a current certification from a recognized testing and balancing agency organization in accordance with generally accepted engineering standards.

CX.2.2.1 – Air System Balancing: Air system balancing shall be accomplished in a manner to first minimize throttling losses, then for fans with fan system power greater than 1 hp, fan speeds shall be adjusted to meet design flow conditions. Balancing procedures shall be in accordance with the National Environmental Balancing Bureau (NEBB) Procedural Standards, the Associated Air Balance Council (AABC) National Standards, or equivalent procedures.

Exception: Damper throttling may be used for air system balancing with fan motors of 1 hp or less, or if throttling results in no greater than 1/3 hp fan horsepower draw above that required if the fan speed were adjusted.

Building envelope pressurization shall be tested and confirmed positive to help prevent infiltration of outdoor air with its excess latent load.

Commercial kitchen hood exhaust cfm shall be sized to prevent building depressurization. Discharge dampers shall be prohibited on constant volume fans and variable volume fans with motors 10 hp and larger.

CX.2.2.2 – Hydronic Systems Balancing: Individual hydronic heating and cooling coils shall be equipped with means for balancing and measuring flow. Hydronic systems shall be proportionately balanced in a manner to first minimize throttling losses, then the pump impeller shall be trimmed or pump speed shall be adjusted to meet design flow conditions.

Each hydronic system shall have either the capability to measure pressure across the pump, or test ports at each side of each pump.

CX.2.3 – Functional Performance Testing (FPT): Functional performance testing shall be conducted.

CX.2.3.1 – Pre-Functional Checklists (PFC), Start-Up and Operational Checkout: Pre-functional checklists are important to ensure that the equipment and systems are properly installed and operational. They help to ensure that functional performance tests may proceed without unnecessary delays. Each piece of equipment shall receive a pre-functional checklist. No sampling strategies may be used. All related checkout and startup procedures shall be documented by the Contractor. Checkout and startup reports shall be submitted to the CxA for review and approval. All pre-functional checklists for a given system must be successfully completed prior to formal functional performance testing of that system.

The CxA or the contractor shall develop the pre-functional checklists. The PFC and startup forms may be independent or on a consolidated form. The contractor shall determine which trade is responsible for executing and documenting each of the line item tasks and note on the form. Each form may have more than one trade responsible for its execution. Only individuals that have direct knowledge and witnessed that a line item task on the Pre-functional Checklist was actually performed shall initial or check that item off.

Contractor shall submit fully executed Pre-functional Checklists upon their completion for approval prior to the start of functional performance testing.

CX.2.3.1.1 – Deficiencies: The responsible trade shall clearly list, at the bottom of the procedure form or on an attached sheet, any outstanding items of the pre-functional checklist, startup and checkout procedures that were not completed successfully. The forms and any outstanding deficiencies shall be provided to the CxA. The installing Subcontractors or vendors shall correct all areas deficient or incomplete in the checklists in a timely manner. The CxA shall verify corrected deficiencies as required.

CX.2.3.1.2 – Scheduling: The Contractor shall work with the CxA to schedule the commissioning activities. The Contractor shall integrate commissioning activities into the master schedule to track the critical path to project completion.

CX.2.3.1.3 – Submittals: The Contractor shall provide submittals for all equipment to be commissioned to the CxA.

- At a minimum, the submittals shall include the manufacturer and model number, the manufacturer's printed installation and detailed start-up procedures, full sequences of operation, O&M data, performance data and control drawings.
- In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the CxA.
- All documentation requested by the CxA shall be included by the Subcontractors in their O&M manual contributions.

CX.2.3.2 – Functional Performance Testing (FPT): The objective of Functional Performance Testing is to demonstrate that each system is operating according to the Design Intent and Contract Documents. The CxA shall develop functional performance testing procedures and submit for review and comment by the Contractor. The Contractor shall execute the FPTs and the CxA shall record the results. The CxA shall submit test results and provide support documentation in accordance with the Commissioning Plan.

Complete functional performance testing prior to acceptance. The Subcontractors, under the observation of the CxA, shall conduct functional performance testing. The CxA and Building Owner shall be invited to witness the testing. The CxA shall document the results.

In general, Functional Performance Testing will be conducted only after pre-functional checklists and startup has been satisfactorily completed. The control system shall be sufficiently pre-tested by the Contractor before it is used to verify performance of other components or systems. The air balancing and water balancing shall be completed before Functional Performance Testing of air-related or water-related equipment or system's scheduled.

Random sampling (not less than 25% of the total number of each) is permitted for Functional Performance Test procedures execution on multiple identical pieces of non-life safety or otherwise non-critical equipment for each individual systems type.

- Exception: Major HVAC equipment (chillers, cooling towers, boilers, hydronic pumps, AHUs of greater than 5000 cfm) shall not be sampled. Each piece of this equipment shall be tested as described herein.

The CxA shall record the results of the Functional Performance Tests. All items of non-conformance issues shall be noted and reported on Commissioning Field Reports and/or a Commissioning Issues Log.

Correction of minor items of non-compliance identified may be made during the tests at the discretion of the CxA. In such cases, the item of non-compliance and resolution shall be documented on the Functional Test Procedure form.

The CxA shall note each satisfactorily demonstrated function on the test form. Formal approval of the Functional Test shall be made later after review by the CxA. The CxA will give final approval on each test, and provide signed copies to the Contractor.

The Contractor shall provide all standard and specialized testing equipment required to perform pre-functional checklists, startup and initial checkout, and Functional Performance Testing. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. Frequency of calibration shall be in accordance with applicable NEBB or AABC requirements.

CX.2.3.2.1 – Equipment: Equipment functional performance testing shall demonstrate the installation and operation of components, systems, and system-to-system interfacing relationships in accordance with approved plans and specifications such that operation, function and maintenance serviceability for each of the commissioned systems shall be confirmed. Testing shall include all modes and sequence of operation, including under full-load, part-load and the following emergency conditions:

- All modes as described in the sequence of operation;
- Redundant or automatic back-up mode;
- Performance of alarms: and
- Mode of operation upon a loss of power and restoration of power.

CX.2.3.2.2 – Controls: HVAC control systems shall be tested to document that control devices, components, equipment, and systems are calibrated, adjusted and operate in accordance with approved plans and specifications. Sequences of operation shall be functionally tested to document they operate in accordance with approved plans and specifications.

CX.2.3.2.3 – Economizers: Air economizers shall undergo a functional test to determine that they operate in accordance with manufacturer's specifications.

CX.2.4 – Preliminary Commissioning Report: A preliminary report of commissioning test procedures and results shall be completed and certified by the CxA (a registered design professional or approved agency) and provided to the EOR and building owner. The report shall be identified as "Preliminary Commissioning Report" and shall identify:

- Itemization of deficiencies found during testing required by this section that have not been corrected at the time of report preparation.
- Deferred tests that cannot be performed at the time of report preparation because of climatic conditions.
- Climatic conditions required for performance of the deferred tests.

CX.2.4.1 – Acceptance of Report: Buildings, or portions thereof, shall not pass the final mechanical inspection until such time as the AHJ has received a letter of transmittal from the building owner acknowledging that the building owner has received the Preliminary Commissioning Report.

CX.2.4.2 – Copy of Report: A copy of the Preliminary Commissioning Report shall be made available for review by the AHJ.

CX.2.5 – Documentation Requirements: The documents described herein shall be provided to the building owner within 90 days of the date of receipt of the certificate of occupancy.

CX.2.5.1 – Drawings: Construction documents shall include the location and performance data on each piece of equipment. The Contractor or CxA shall contact the EOR should any information be unclear.

CX.2.5.2 – Manuals: The CxA shall facilitate and confirm that an operating and maintenance manual is developed, provided and includes all of the following:

- Submittal data stating equipment size and selected options for each piece of equipment requiring maintenance.
- Manufacturer's operation manuals and maintenance manuals for each piece of equipment requiring maintenance, except equipment not furnished as part of the project. Required routine maintenance actions shall be clearly identified.

PLUMBING GENERAL NOTES

1. REFERENCE THE SPECIFICATIONS FOR MATERIAL AND EQUIPMENT INSTALLATION STANDARDS.
2. THE PLUMBING INSTALLATION SHALL COMPLY WITH ALL STATE AND LOCAL CODES.
3. UTILITIES AND SERVICES INDICATED ARE TAKEN FROM VARIOUS OLD AND NEW SURVEYS, AS-BUILT RECORDS AND FIELD INVESTIGATIONS. UNFORSEEN CONDITIONS PROBABLY EXIST AND NEW WORK MAY NOT BE FIELD LOCATED EXACTLY AS SHOWN ON DRAWINGS. COOPERATION WITH OTHER TRADES IN ROUTING AND BURIAL DEPTHS, AS DETERMINED DURING CONSTRUCTION, WILL BE NECESSARY.
4. FIELD VERIFY EXISTING INSTALLATIONS. MODIFY EXISTING PLUMBING SYSTEMS, WHICH ARE TO REMAIN ACTIVE, TO FACILITATE RECONNECTION AND EXTENSION OF THE NEW WORK.
5. NOTIFY OWNER AT LEAST 24 HOURS PRIOR TO INTERRUPTING EXISTING SERVICE. SCHEDULE DISCONNECTION AND TIE-INS TO MINIMIZE DISRUPTION OF SERVICES. SERVICES ARE NOT TO BE LEFT DISRUPTED DURING NON-NORMAL CONTRACTOR WORKING HOURS.
6. PLANS ARE NOT COMPLETELY TO SCALE. PIPE ROUTING SHOWN IS SCHEMATIC AND IS NOT INTENDED TO INDICATE EXACT ROUTING. CONTRACTOR SHALL PROVIDE ANY ADDITIONAL OFFSETS AND FITTINGS REQUIRED FOR PROPER INSTALLATION AND TO MAINTAIN CLEARANCES. VERIFY STRUCTURAL, MECHANICAL AND ELECTRICAL INSTALLATIONS AND OTHER POTENTIAL OBSTRUCTIONS AND ROUTE PIPING TO AVOID INTERFERENCES.
7. PROVIDE ALL OFFSETS AND FITTINGS AND MAKE CONNECTION TO SITE UTILITIES.
8. CONCEAL PIPING ABOVE CEILINGS, WITHIN WALLS OR CHASES EXCEPT IN MECHANICAL ROOMS OR AS SPECIFICALLY NOTED.
9. PROVIDE ACCESS PANELS FOR ALL VALVES CONCEALED IN WALLS OR ABOVE NON-ACCESSIBLE CEILINGS.
10. SLEEVE AND/OR FIRESTOP ALL PENETRATIONS THROUGH RATED WALLS, CEILINGS, AND FLOORS WITH UL LISTED ASSEMBLIES. FIRESTOP ASSEMBLIES SHALL BE EQUAL TO OR EXCEED THE RATING OF THE WALL, CEILING OR FLOOR. SEE ARCHITECTURAL DRAWINGS FOR FINAL FINISHES.
11. FLASH AND COUNTER-FLASH ROOF PENETRATIONS.
12. WHEN BEAM SLEEVE PENETRATIONS ARE NECESSARY, COORDINATE PENETRATIONS WITH ALL TRADES. THE ARCHITECT AND THE STRUCTURAL ENGINEER.
13. PROVIDE FOUNDATION PAD PENETRATION SLEEVES. ALLOW 1" MINIMUM CLEARANCE BETWEEN SLEEVE INSIDE SURFACE AND PIPE EXTERIOR.
14. SEE ARCHITECTURAL DRAWINGS FOR FIXTURE LOCATIONS AND MOUNTING HEIGHTS.
15. PROVIDE AUTOMATIC TRAP PRIMERS FOR FLOOR DRAIN TRAP SEALS.
16. PROVIDE AN AIR GAP, WHEN REQUIRED BY CODE, SERVING INDIVIDUAL FIXTURES, DEVICES, APPLIANCES AND APPARATUS.
17. ALL EXPOSED PIPE AND FITTINGS IN FINISHED AREAS SHALL BE CHROME PLATED.
18. MOUNT HOSE BIBBS 24" ABOVE FINISHED GRADE.
19. PROVIDE CLEANOUTS IN ACCORDANCE WITH ALL STATE AND LOCAL CODES. INSTALL CLEANOUT WITH COVER FLUSH TO FINISH SURFACE.
20. COORDINATE EXACT FLOOR DRAIN LOCATIONS WITH ARCHITECTURAL DRAWINGS. SET FLOOR DRAINS BELOW FINISHED FLOOR TO ALLOW FOR FLOOR SLOPING TO THE DRAIN.
21. COORDINATE PIPING WITH ALL ELECTRICAL EQUIPMENT (PANELS, TRANSFORMERS, ETC.) PRIOR TO ANY INSTALLATION. DO NOT ROUTE ANY PIPING OVER ANY ELECTRICAL PANELS UNDER ANY CIRCUMSTANCES. ANY PIPING RUN OVER PANELS SHALL BE RE-ROUTED AT NO ADDITIONAL COST.
22. ALL WALL MOUNTED LAVATORIES SHALL BE ATTACHED TO FLOOR MOUNTED CARRIER DESIGNED TO WITHSTAND A VERTICAL LOAD OF 250 POUNDS ON THE FRONT OF THE FIXTURE.
23. PROVIDE SANITARY WASTE, VENT, DOMESTIC WATER, ETC. ROUGH-IN AND MAKE FINAL CONNECTIONS (TO INCLUDE PROVIDING ALL NECESSARY RELATED STOPS, VALVES, TRAPS, ETC. AND MAKE READY FOR USE) TO ALL EQUIPMENT, WHETHER FURNISHED BY THIS CONTRACTOR OR FURNISHED BY OTHERS.
24. ALL MATERIALS AND EQUIPMENT INSTALLED IN RETURN AIR PLENUMS SHALL BE NON-COMBUSTIBLE AND UL APPROVED FOR USE IN A RETURN AIR PLENUM SPACE. IF MATERIALS ARE NOT NON-COMBUSTIBLE IN RETURN AIR PLENUMS, THEY SHALL BE REPLACED OR WRAPPED WITH A UL LISTED FIRE RATED FIRE WRAP (I.E. FYREWRAP 0.5 PLENUM INSULATION OR APPROVED EQUAL) AND INSTALLED IN ACCORDANCE WITH THE MANUFACTURES UL LISTED DETAILS AND RECOMMENDATIONS AT NO ADDITIONAL COST. (NOTE: REFER TO MECHAICAL DRAWINGS FOR RETURN AIR PLENUM LOCATIONS.)
25. PIPING, INSULATION, FITTINGS, MATERIALS, COVERS AND FINISHES IN RETURN AIR PLENUM SHALL HAVE A MAXIMUM FLAME SPREAD RATING OF 25 AND A MAXIMUM SMOKE DEVELOPED RATING OF 50.

STRUCTURAL GENERAL NOTES

1000 GENERAL NOTES:

1. STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH PROJECT SPECIFICATIONS AND ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING, AND SITE DRAWINGS. CONSULT THESE DRAWINGS FOR OPENINGS, DEPRESSIONS, EQUIPMENT WEIGHTS AND LOCATIONS, EMBEDDED ITEMS AND OTHER DETAILS NOT SHOWN ON STRUCTURAL DRAWINGS.
2. DIMENSIONS AND CONDITIONS MUST BE VERIFIED IN THE FIELD. ANY DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER OF RECORD BEFORE PROCEEDING WITH THE AFFECTED PART OF THE WORK.
3. NO STRUCTURAL MEMBER OR COMPONENT SHALL BE CUT, NOTCHED, OR OTHERWISE ALTERED UNLESS APPROVED IN WRITING BY THE ENGINEER OF RECORD. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY AND ALL COSTS INCURRED BY THE ENGINEER OF RECORD FOR REVIEW OF ANY SUCH DEVIATIONS.
4. DO NOT SCALE DRAWINGS.
5. THE STRUCTURE IS DESIGNED TO BE SELF-SUPPORTING AND STABLE AFTER THE BUILDING IS COMPLETE. IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE ERECTION PROCEDURES AND SEQUENCE TO INSURE SAFETY OF THE BUILDING AND ITS COMPONENTS DURING ERECTION. THIS INCLUDES THE ADDITION OF NECESSARY SHORING, SHEETING, TEMPORARY BRACING, GUYS OR TIE-DOWNS.
6. DETAILS LABELED "TYPICAL DETAILS" ON THE DRAWINGS SHALL APPLY TO ALL SITUATIONS OCCURRING ON THE PROJECT THAT ARE THE SAME OR SIMILAR TO THOSE SPECIFICALLY DETAILED. THE APPLICABILITY OF THE DETAIL TO ITS LOCATION ON THE DRAWINGS CAN BE DETERMINED BY THE TITLE OF DETAIL. SUCH DETAILS SHALL APPLY WHETHER OR NOT THEY ARE REFERENCED AT EACH LOCATION. QUESTIONS REGARDING APPLICABILITY OF TYPICAL DETAILS SHALL BE DETERMINED BY THE ENGINEER OF RECORD.
7. THE GENERAL CONTRACTOR SHALL COMPARE THE ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING, CIVIL AND STRUCTURAL DRAWINGS AND REPORT ANY DISCREPANCIES BETWEEN EACH SET OF DRAWINGS AND WITHIN EACH SET OF DRAWINGS TO THE ARCHITECT AND ENGINEER OF RECORD PRIOR TO THE FABRICATION AND INSTALLATION OF ANY STRUCTURAL MEMBERS.
8. THE CONTRACT STRUCTURAL DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE, AND DO NOT INDICATE THE METHOD OR MEANS OF CONSTRUCTION. THE CONTRACTOR SHALL SUPERVISE AND DIRECT THE WORK AND SHALL BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, PROCEDURES, TECHNIQUES, SEQUENCE AND SAFETY. THE ENGINEER DOES NOT HAVE CONTROL OR CHARGE OF, AND SHALL NOT BE RESPONSIBLE FOR, CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, OR PROCEDURES, FOR SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK, FOR THE ACTS OR OMISSION OF THE CONTRACTOR, SUBCONTRACTOR OR ANY OTHER PERSONS PERFORMING ANY OF THE WORK, OR FOR THE FAILURE OF ANY OF THEM TO CARRY OUT THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.
9. THE STRUCTURAL ENGINEER'S OBLIGATIONS TO REVIEW SHOP DRAWINGS AND OTHER SUBMITTALS AND TO RETURN THEM IN A TIMELY MANNER ARE CONDITIONED UPON THE PRIOR REVIEW AND APPROVAL OF THE SHOP DRAWINGS OR SUBMITTALS BY THE CONTRACTOR AS REQUIRED IN THE CONSTRUCTION CONTRACT AND THE CONTRACTOR'S SUBMITTAL OF THE SHOP DRAWINGS AND OTHER SUBMITTALS IN ACCORDANCE WITH A WRITTEN SCHEDULE DISTRIBUTED IN ADVANCE TO THE ENGINEER IDENTIFYING THE DATES FOR THE SUBMITTAL OF THE VARIOUS SHOP DRAWINGS AND SUBMITTALS.
